DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.
2. Claims 1 and 3-14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Vandergrift in view of Lazarus and Hagood as previously applied.

Regarding claims 1 and 3-14, as set forth in the decision by the Board of Patent Appeals and Interferences, Vandergrift, Lazarus and Hagood make obvious the combination of two transducer elements laminated to a racket frame and a circuit located within a handle portion.

With regard to the amendments in claims 1, 6 and 11, Lazarus discloses that flex circuits are old and well-known in the art to be used in piezoelectric damping systems. See column 9, lines 42-47. Although Lazarus does not explicitly recite a Y-shaped flex circuit, Figure 10 shows that the circuitry required to connect actuators 110 within a racket would be naturally Y-shaped.

Regarding the storage element within the circuit, Lazarus discloses the use of a shunt circuit in his piezoelectric system. See column 9, lines 25-27. Lazarus also discloses that

the best such shunt within the piezoelectric system is a shunt resistor and the optimal shunt resistor has an inherent vibration frequency and capacitance. See column 9, lines 32-42. As such, the capacitance of the shunt resistor is considered to allow the circuit to inherently store power.
